NOTES

- In this subclass, the following terms or expressions are used with the meanings indicated:
 - "use of materials for coating compositions" means the use of known or new polymers or products;
 - "rubber" includes:
 - natural or conjugated diene rubbers;
 - rubber in general (for a specific rubber, other than a natural rubber or a conjugated diene rubber, see the group provided for coating compositions based on such macromolecular compounds);
 - "based on" is defined by means of Note (3), below;
 - "filling pastes" means materials used to fill up the holes or cavities of a substrate in order to smooth its surface prior to coating.
- In this subclass, coating compositions, containing specific organic macromolecular substances are classified only according to the macromolecular substance, non-macromolecular substances not being taken into account.

Example: a coating composition containing polyethene and amino-propyltrimethoxysilane is classified in group [C09D 123/06](#).

However, coating compositions containing combinations of organic non-macromolecular compounds having at least one polymerisable carbon-to-carbon unsaturated bond with prepolymers or polymers other than unsaturated polymers of groups [C09D 159/00](#) - [C09D 187/00](#) are classified according to the unsaturated non-macromolecular component in group [C09D 4/00](#).

Example: a coating composition containing polyethene and styrene monomer is classified in group [C09D 4/00](#).

Aspects relating to the physical nature of the coating compositions or to the effects produced, as defined in group [C09D 5/00](#), if clearly and explicitly stated, are also classified in this subclass.

Coating compositions characterised by other features, e.g. additives, are classified in group [C09D 7/00](#), unless the macromolecular constituent is specified.
- In this subclass, coating compositions comprising two or more macromolecular constituents are classified according to the macromolecular constituent or constituents present in the highest proportion, i.e. the constituent on which the composition is based. If the composition is based on two or more constituents, present in equal proportions, the composition is classified according to each of these constituents.

Example: a coating composition containing 80 parts of polyethene and 20 parts of polyvinylchloride is classified in group [C09D 123/06](#). A coating composition containing 40 parts of polyethene and 40 parts of polyvinylchloride is classified in groups [C09D 123/06](#) and [C09D 127/06](#).
- In groups [C09D 101/00](#) - [C09D 201/00](#), any macromolecular constituent of a coating composition which is not identified by the classification according to Note (3) after the title of subclass [C09D](#), and the use of which is determined to be novel and non-obvious, must also be classified in a group chosen from groups [C09D 101/00](#) - [C09D 201/00](#).

{This Note corresponds to IPC Note (1) relating to [C09D 101/00](#) - [C09D 201/00](#).}
- Any macromolecular constituent of a coating composition which is not identified by the classification according to Note (3) after the title of subclass [C09D](#) or Note (1) above, and which is considered to represent information of interest for search, may also be classified in a group chosen from groups [C09D 101/00](#) - [C09D 201/00](#). This can for example be the case when

C09D

C09D

(continued)

it is considered of interest to enable searching of coating compositions using a combination of classification symbols. Such non-obligatory classification should be given as "additional information." {This Note corresponds to IPC Note (2) relating to [C09D 101/00](#) - [C09D 201/00](#).}

- In groups [C09D 165/00](#) - [C09D 185/00](#), in the absence of an indication to the contrary, coating compositions based on macromolecular compounds obtained by reactions forming two different linkages in the main chain are classified only according to the linkage present in excess.
{This Note corresponds to IPC Note (1) relating to [C09D 165/00](#) - [C09D 185/00](#).}
- {In this subclass, combination sets [C-Sets] are used. Detailed information about the C-Sets construction and the associated syntax rules is found in the definitions for [C09D](#).}
- {In addition to Note (4) above [C08L 2666/00](#) indexing codes were used for C-Sets classification of documents before April 2012. See C-Sets Search Rules in [C08L](#), in [C09D](#), or in [C09J](#) Definitions.}

WARNINGS

- The following IPC groups are not in the CPC scheme. The subject matter for these IPC groups is classified in the following CPC groups:

187/005 . {Block or graft polymers not provided for in groups [C09D 101/00](#) - [C09D 185/04](#)}

Coating compositions based on natural macromolecular compounds or on derivatives thereof (based on polysaccharides [C09D 101/00](#) - [C09D 105/00](#); based on natural rubber [C09D 107/00](#))

189/00 Coating compositions based on proteins; Coating compositions based on derivatives thereof (foodstuff preparations [A23J 3/00](#))

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

189/005 . {Casein}

189/02 . Casein-aldehyde condensates

189/04 . Products derived from waste materials, e.g. horn, hoof or hair

189/06 . . derived from leather or skin

191/00 Coating compositions based on oils, fats or waxes; Coating compositions based on derivatives thereof (polishing compositions, ski waxes [C09G](#))

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

191/005 . {Drying oils}

191/02 . Vulcanised oils, e.g. factice

191/04 . Linoxyn

191/06 . Waxes

191/08 . . Mineral waxes

193/00 Coating compositions based on natural resins; Coating compositions based on derivatives thereof (based on polysaccharides [C09D 101/00](#) - [C09D 105/00](#); based on natural rubber [C09D 107/00](#); polishing compositions [C09G](#))

NOTE

193/02 . Shellac

193/04 . Rosin

195/00 Coating compositions based on bituminous materials, e.g. asphalt, tar, pitch

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

195/005 . {Aqueous compositions, e.g. emulsions}

197/00 Coating compositions based on lignin-containing materials (based on polysaccharides [C09D 101/00](#) - [C09D 105/00](#))

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

197/002 . {Peat, lignite, coal (briquettes [C10L 5/00](#); working-up peat; ceramic products based on carbon or carbides)}

197/005 . {Lignin}

197/007 . {Cork}

197/02 . Lignocellulosic material, e.g. wood, straw or bagasse

199/00 Coating compositions based on natural macromolecular compounds or on derivatives thereof, not provided for in groups [C09D 101/00](#) - [C09D 107/00](#) or [C09D 189/00](#) - [C09D 197/00](#)

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

201/00 Coating compositions based on unspecified macromolecular compounds

NOTE

{In this group, C-Sets are used for classification. The detailed information about the C-Sets construction and the associated syntax rules are found in the Definitions of [C09D](#)}

201/005 . {Dendritic macromolecules}

201/02 . characterised by the presence of specified groups {, e.g. terminal or pendant functional groups}

201/025 . . {containing nitrogen atoms}

201/04 . . containing halogen atoms

201/06 . . containing oxygen atoms {([C09D 201/025](#) takes precedence)}

201/08 . . . Carboxyl groups

201/10 . . containing hydrolysable silane groups
